

UNEARTHING THE ENVIRONMENTAL IMPACT OF HUMAN ACTIVITIES: A GLOBAL CO₂ EMISSION ANALYSIS.

OUR TEAM MEMBERS:

- **Vinothini S**
- **Kowsalya K**
- **Subalakshmi S**
- **Poornima N.**

COLLEGE NAME:

Govindammal Aditanar College for Women, Tiruchendur.

A GLOBAL CO₂ EMISSION ANALYSIS

1. Introduction:

1.1) Overview:

*Global warming is the **unusually rapid increase in earth's average surface temperature over the past century primarily due to the greenhouse gases released as people burn fossil fuels.***

Carbon dioxide emission or co₂ emissions are emissions stemming from the burning of fossil fuels and the manufacture of cement; they include carbon dioxide produced during consumption of solid, liquid and gas fuels as well as gas flaring.

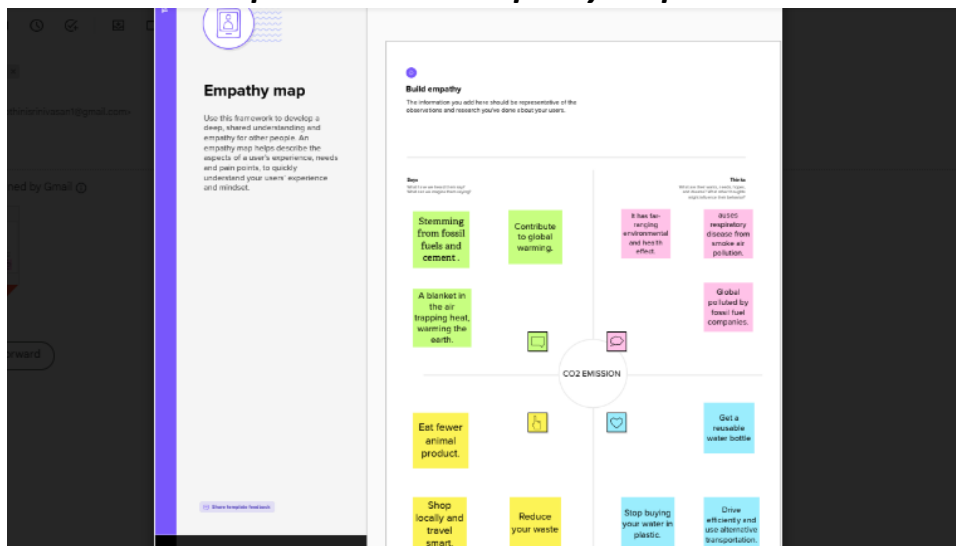

1.2) PURPOSE:

- ◆ We discover the hazards caused by the emissions of co2.
- ◆ We can find solutions to minimize the co2 emission.
- ◆ We gained a thorough knowledge about TABLEAU and MYSQL.
- ◆ We gained knowledge about the emission of co2 based on the years.

2. Problem definition and design thinking:

2.1) Empathy Map:

We can define problem-solving as a process of understanding the problem, designing an algorithm for it, and finally implementing the solution to it. Therefore, we can say that a successful problem-solving process depends on the survey mentioned below.s **on the following factors: Understanding the problem and defining it precisely. We created the Empathy Map to define and understand the problem. Our empathy map is shown below.**

Here we include the says, thinks, do's and feels of people about the problem.

2.2) Ideation and brainstorming:

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

Person 1

- Plant a tree.
- Stop buying your water in plastic bottle
- Turn off lights when you're leaving the room

Person 2

- Reduce your food waste
- Unplug devices when you're not using them
- Use reusable bags.
- Turn your water heater down to 120 deg F

Person 3

- Drive efficiently
- Eat fewer animal product.
- Use renewable sources
- Loaded laundry

Person 4

- Buy vintage or recycled clothing.
- Cut down your garbage by 10 percent.
- Reduce the usage of fossil fuels.
- Adjust your thermostat.

TIP

You can select a sticky note and hit the pencil (switch to sketchy) icon to start drawing!

Advantages and Disadvantages:

Advantages:

- *There are large, and immediate, economic co benefits from reducing co2 emission.*

Climate change and the environment:

- *Helps to dispel some of the gloomy arithmetic of climate change.*
- *The scale and range of ancillary benefits that derive from reducing emissions of co2 and other greenhouse gases.*
- *Substituting low carbon energy for fossil fuel would help to migrate this impact and create large benefits.*
- *Fossil fuel combustion emits both co2 and particles less than 2.5 microns in size which is the major contributor to deaths from air pollution.*
- *It is an important greenhouse gas that helps to trap the heat of the atmosphere.*

Disadvantages:

- *The uncomfortable fact is that costs of abating emission of co2 must be incurred today or in the near future.*

- *As the co2 level rises, the earth's temperature rises with it, causing the melting of the polar ice caps directly to the oceans.*
- *Exposure to co2 can produce a variety of health effects. These may include increased heart rate, elevated blood pressure, coma, asphyxia and convulsions.*
- *Co2 released into the oceans causes water pollution. It makes unwanted changes in ocean acidity.*
- *The main disadvantages of MEA in co2 absorption are that MEA is volatile to oxidative degradation and the thermal degradation leading to a large amount of solvent loss.*

APPLICATIONS:

- ✓ *New opportunities to use co2 in the development of products and services are capturing the attention of governments, industry and the investment community interested in mitigating climate change as well as in other factors, including technology leadership and supporting a circular economy.*
- ✓ *This analysis considers the near-term market potential for five key categories of co2-derived products and services: fuels, chemicals, building material from waste and co2 use to enhance the yields of biological processes.*
- ✓ *The market for co2 use is expected to remain relatively small in the short term, but early opportunities could be developed, especially those related to building materials.*
- ✓ *Public procurement of low-carbon products can help to create an early market for co2-derived products and assist in the development of technical standards.*

CONCLUSION:

By this project, we gained knowledge to reduce co2 emission.

Some way to reduce co2 emission:

FOOD:

- *Eat low on the food chain.*
- *Choose organic and local.*
- *Compost your food waste if possible.*

CLOTHING:

- *Don't buy fast fashion.*
- *Buy vintage or recycled clothing.*
- *Wash your clothing in cold water.*

SHOPPING:

- *Buy less stuff.*
- *Turn your water heater down to 120 F. This can save about 55 pounds of co2 a year.*

TRANSPORTATION:

- *Drive less. Walk. Take public transportation, carpool, rideshare, or bike to your destination when possible.*
- *Take care of your car.*
- *If you must drive, avoid unnecessary breaks and acceleration.*

FUTURE SCOPE:

Data are extracted from the year 1970 to 2020 for this analysis. If the project is given for further development: the data for the year 2021 to 2023 will be included. More visualization graphs will be drawn for further investigations. By this analysis, we create many technologies to reduce co2 emission.
